Made of Wire

Wire is currently experiencing a comeback. The inconspicuous material which is able to assume almost any shape has great potential: aesthetically, functionally and economically.

To demonstrate this potential, students at the Chair of Industrial Design at Technische Universität München (TUM) designed products made of wire centered on daily kitchen work. They range from simple hooks to a trolley-table.

All ideas are results of a competition, arranged by Vauth-Sagel Systemtechnik GmbH and the Chair of Industrial Design at TUM. Thus, during interzum 2013 the designs are presented not only to a professional audience but also to a jury of experts. The three best ideas will be awarded - a later realization is not excluded.

interzum 2013 // innovation of interior // Hall 4.2 // May, 13 - 16
